

1 ABSTRACT OF THE DISCLOSURE

2 A peripheral computer enclosure includes a casing, a  
3 plurality of slots, a plurality of canisters being disposed  
4 in the slots, a plurality of storage devices, a plurality of  
5 canisters, a back plane, a power supply, a blower, a  
6 controller card and a personality board. The casing has an  
7 open front and a back. The slots are disposed inside the  
8 casing. The back plane is disposed in the casing. The  
9 power supply is disposed in the casing. The blower is  
10 disposed in the casing. Each storage device is disposed in  
11 one of the canisters. The back plane interconnects the  
12 storage devices. The personality board is connected to the  
13 back plane. The controller card is connected to the back  
14 plane.
